

TECHNICAL DATA SHEET

ARTIFICIAL BAIT FOR FISHING

PRODUCT DESCRIPTION

It is an artificial bait made with totally natural products (fish flours and oils).

COMPOSITION

This bait has been highly tested and used by the inshore fleets throughout Spain since 2008; between seventy and eighty percent of the octopus and prawn fleet in Galicia uses it.

PRESENTATION

It is supplied in 15-kilogram cardboard boxes (one pallet carries 525 kilograms, 35 boxes), using 50 or 60 grams per trap, so each box can bait between 210 and 250 traps.

CONSERVATION

It can be used for up to three days with the same bait, although it is ideal to refresh it with a piece of 15 or 20 grams each day.

DURABILITY AND USE

It does not require refrigeration for its conservation and its durability can exceed four months depending on the environment where it is stored.

COMPETITIVE ADVANTAGE

It has the advantage that certain predators in fishing, such as fleas or snails, do not eat it, so it lasts longer than natural bait.

Much more convenient, fast and clean for baiting traps than natural bait.
